

# Project 2

# Project in a nutshell

- IMDB Clone
- Shows new movies and descriptions
- Users can give ratings
- Users can collate movies to watch in watchlist

# Concept Design

## Problem & Solution Statements

### Problem:

- Avid movie viewers want to share their opinions on movies they have watched so that others may make better decisions on movies to watch.

### Solution:

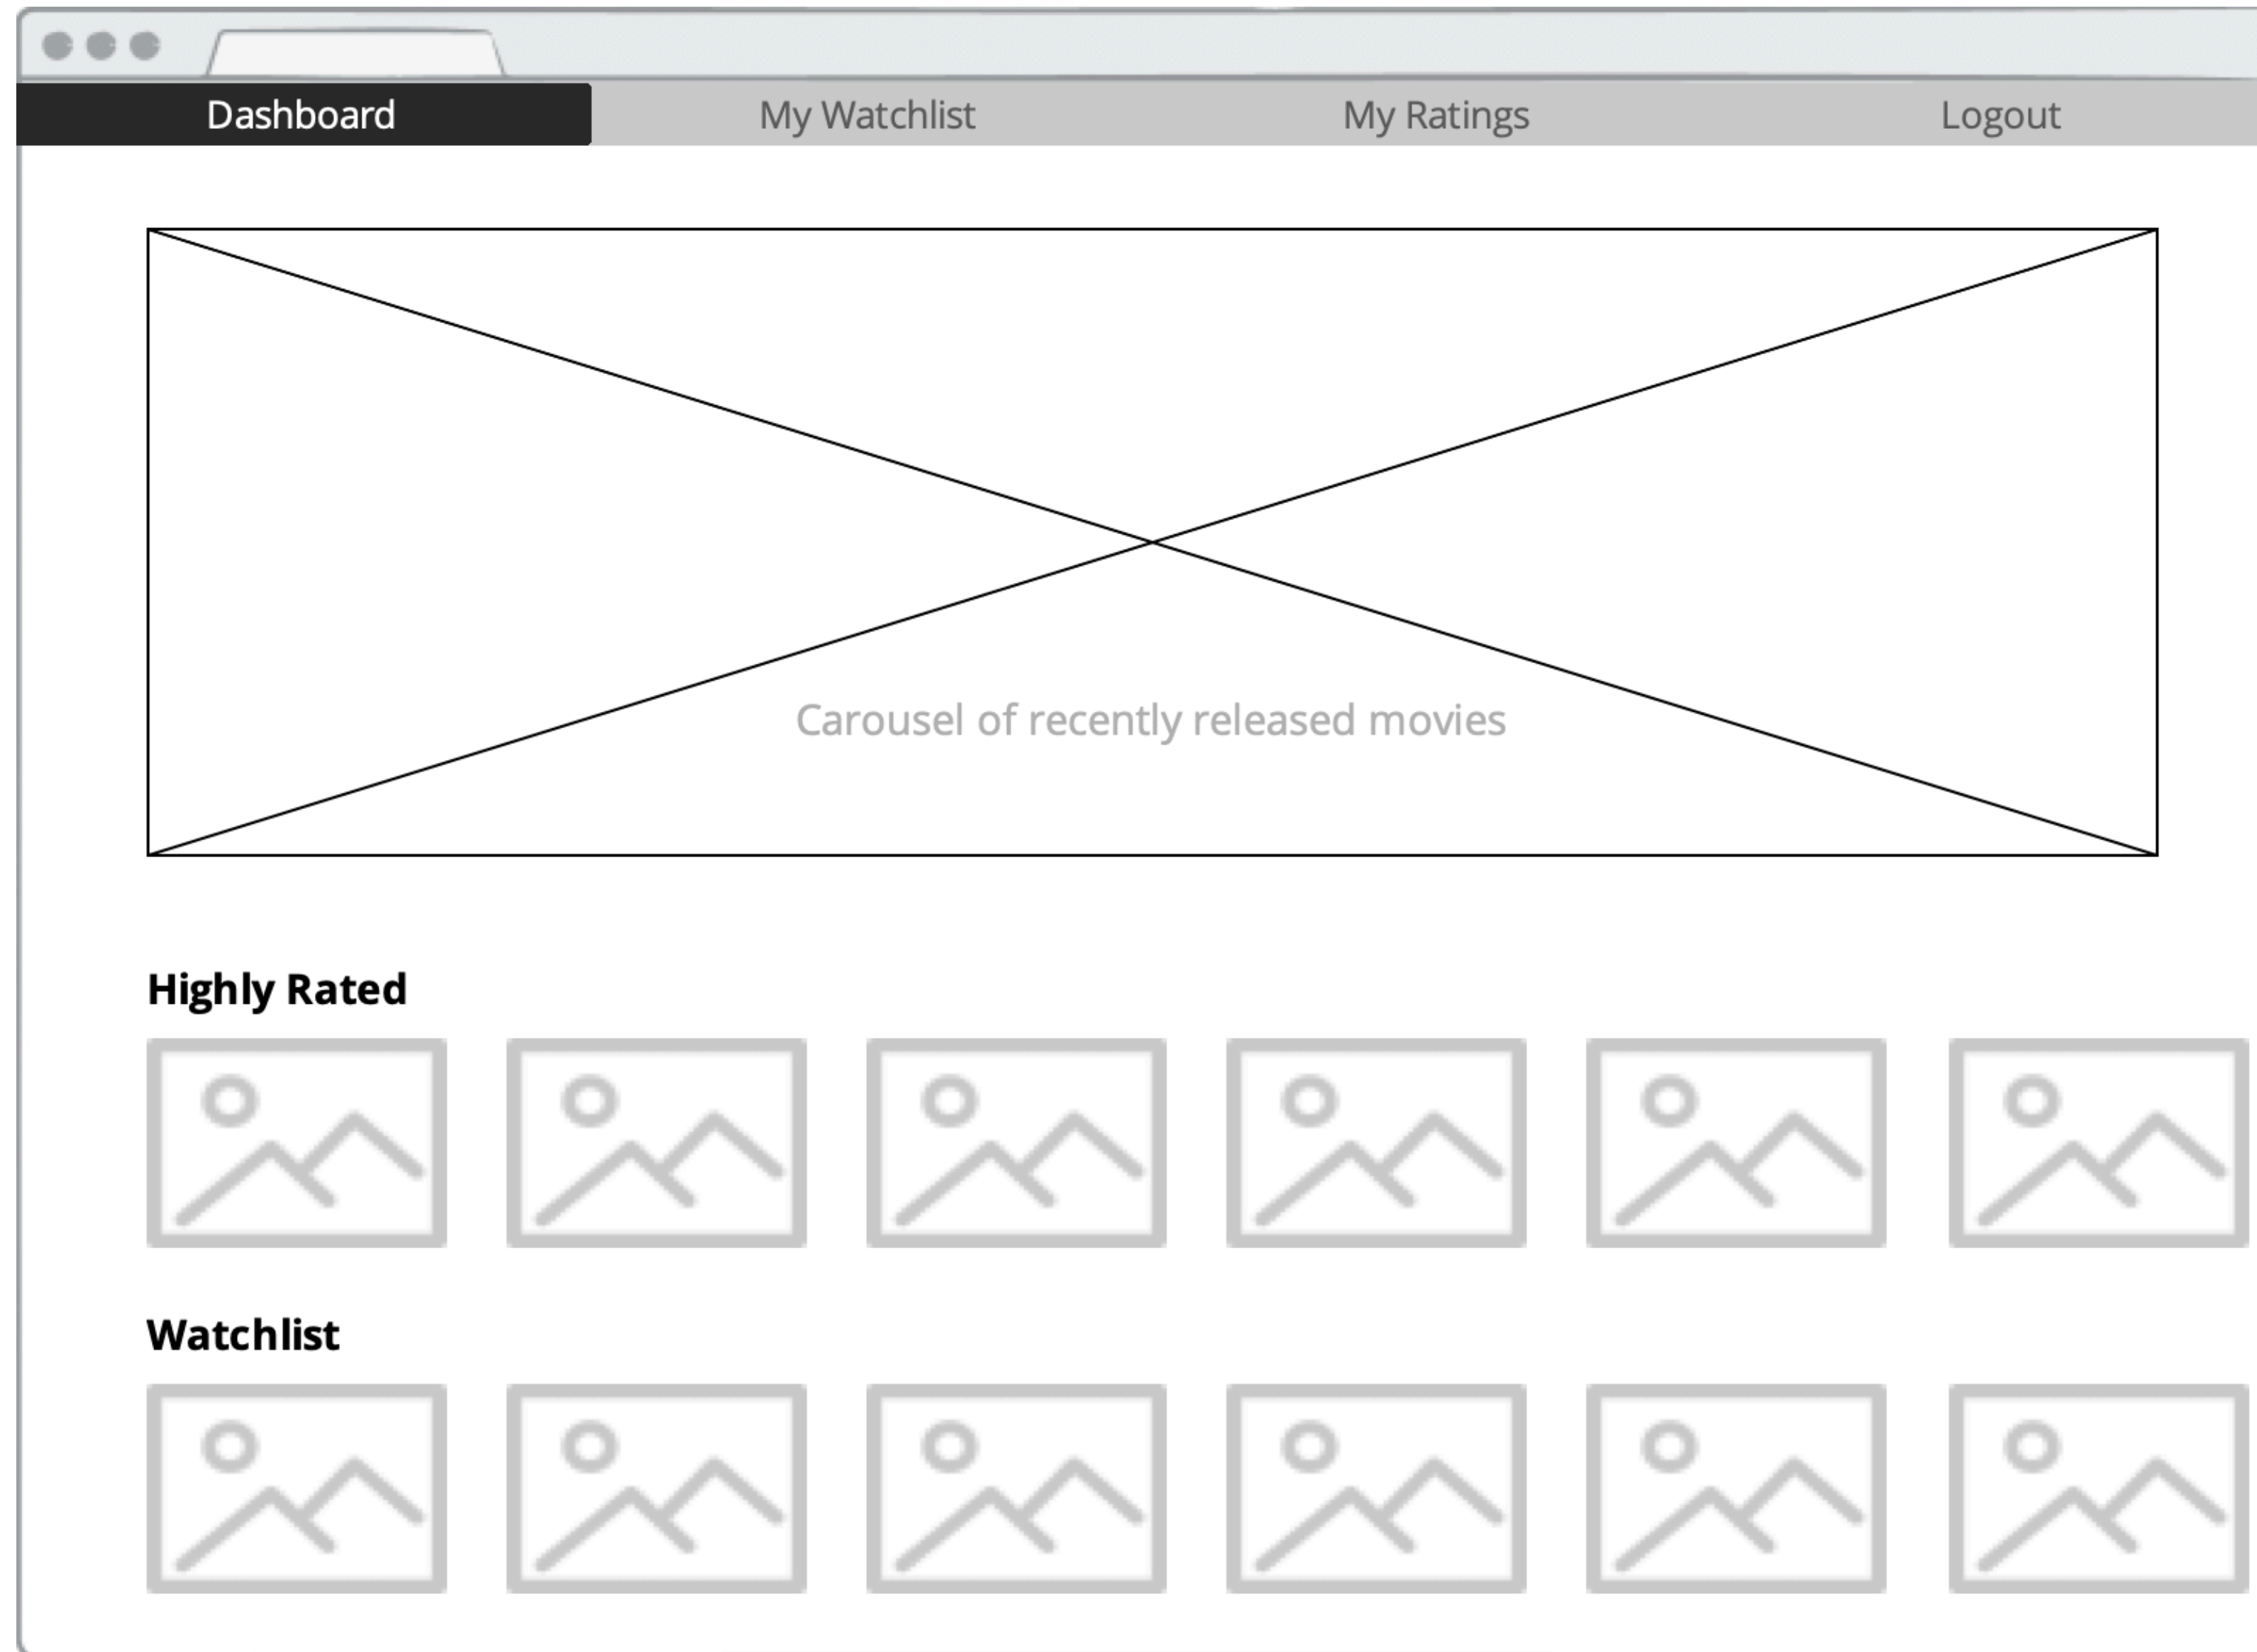

- A web app that shows new and upcoming movies with user generated ratings and aggregates to enable viewers to make informed decisions. Additionally a movie watchlist to keep track of movies to watch.

# User Stories

1. As an avid movie viewer, I want to share my opinions on movies I have already seen so that others can share their opinions
2. As an avid movie viewer, I want to view others opinions on a movie before deciding to watch it so that I will not be disappointed when watching it
3. As an avid movie viewer, I want to know what movies are newly released and how good they are so that I can have some options in what movies I can watch.
4. As an avid movie viewer, I want to have a list of what movies I intend to watch in the future so that I don't forget about the movies that do interest me

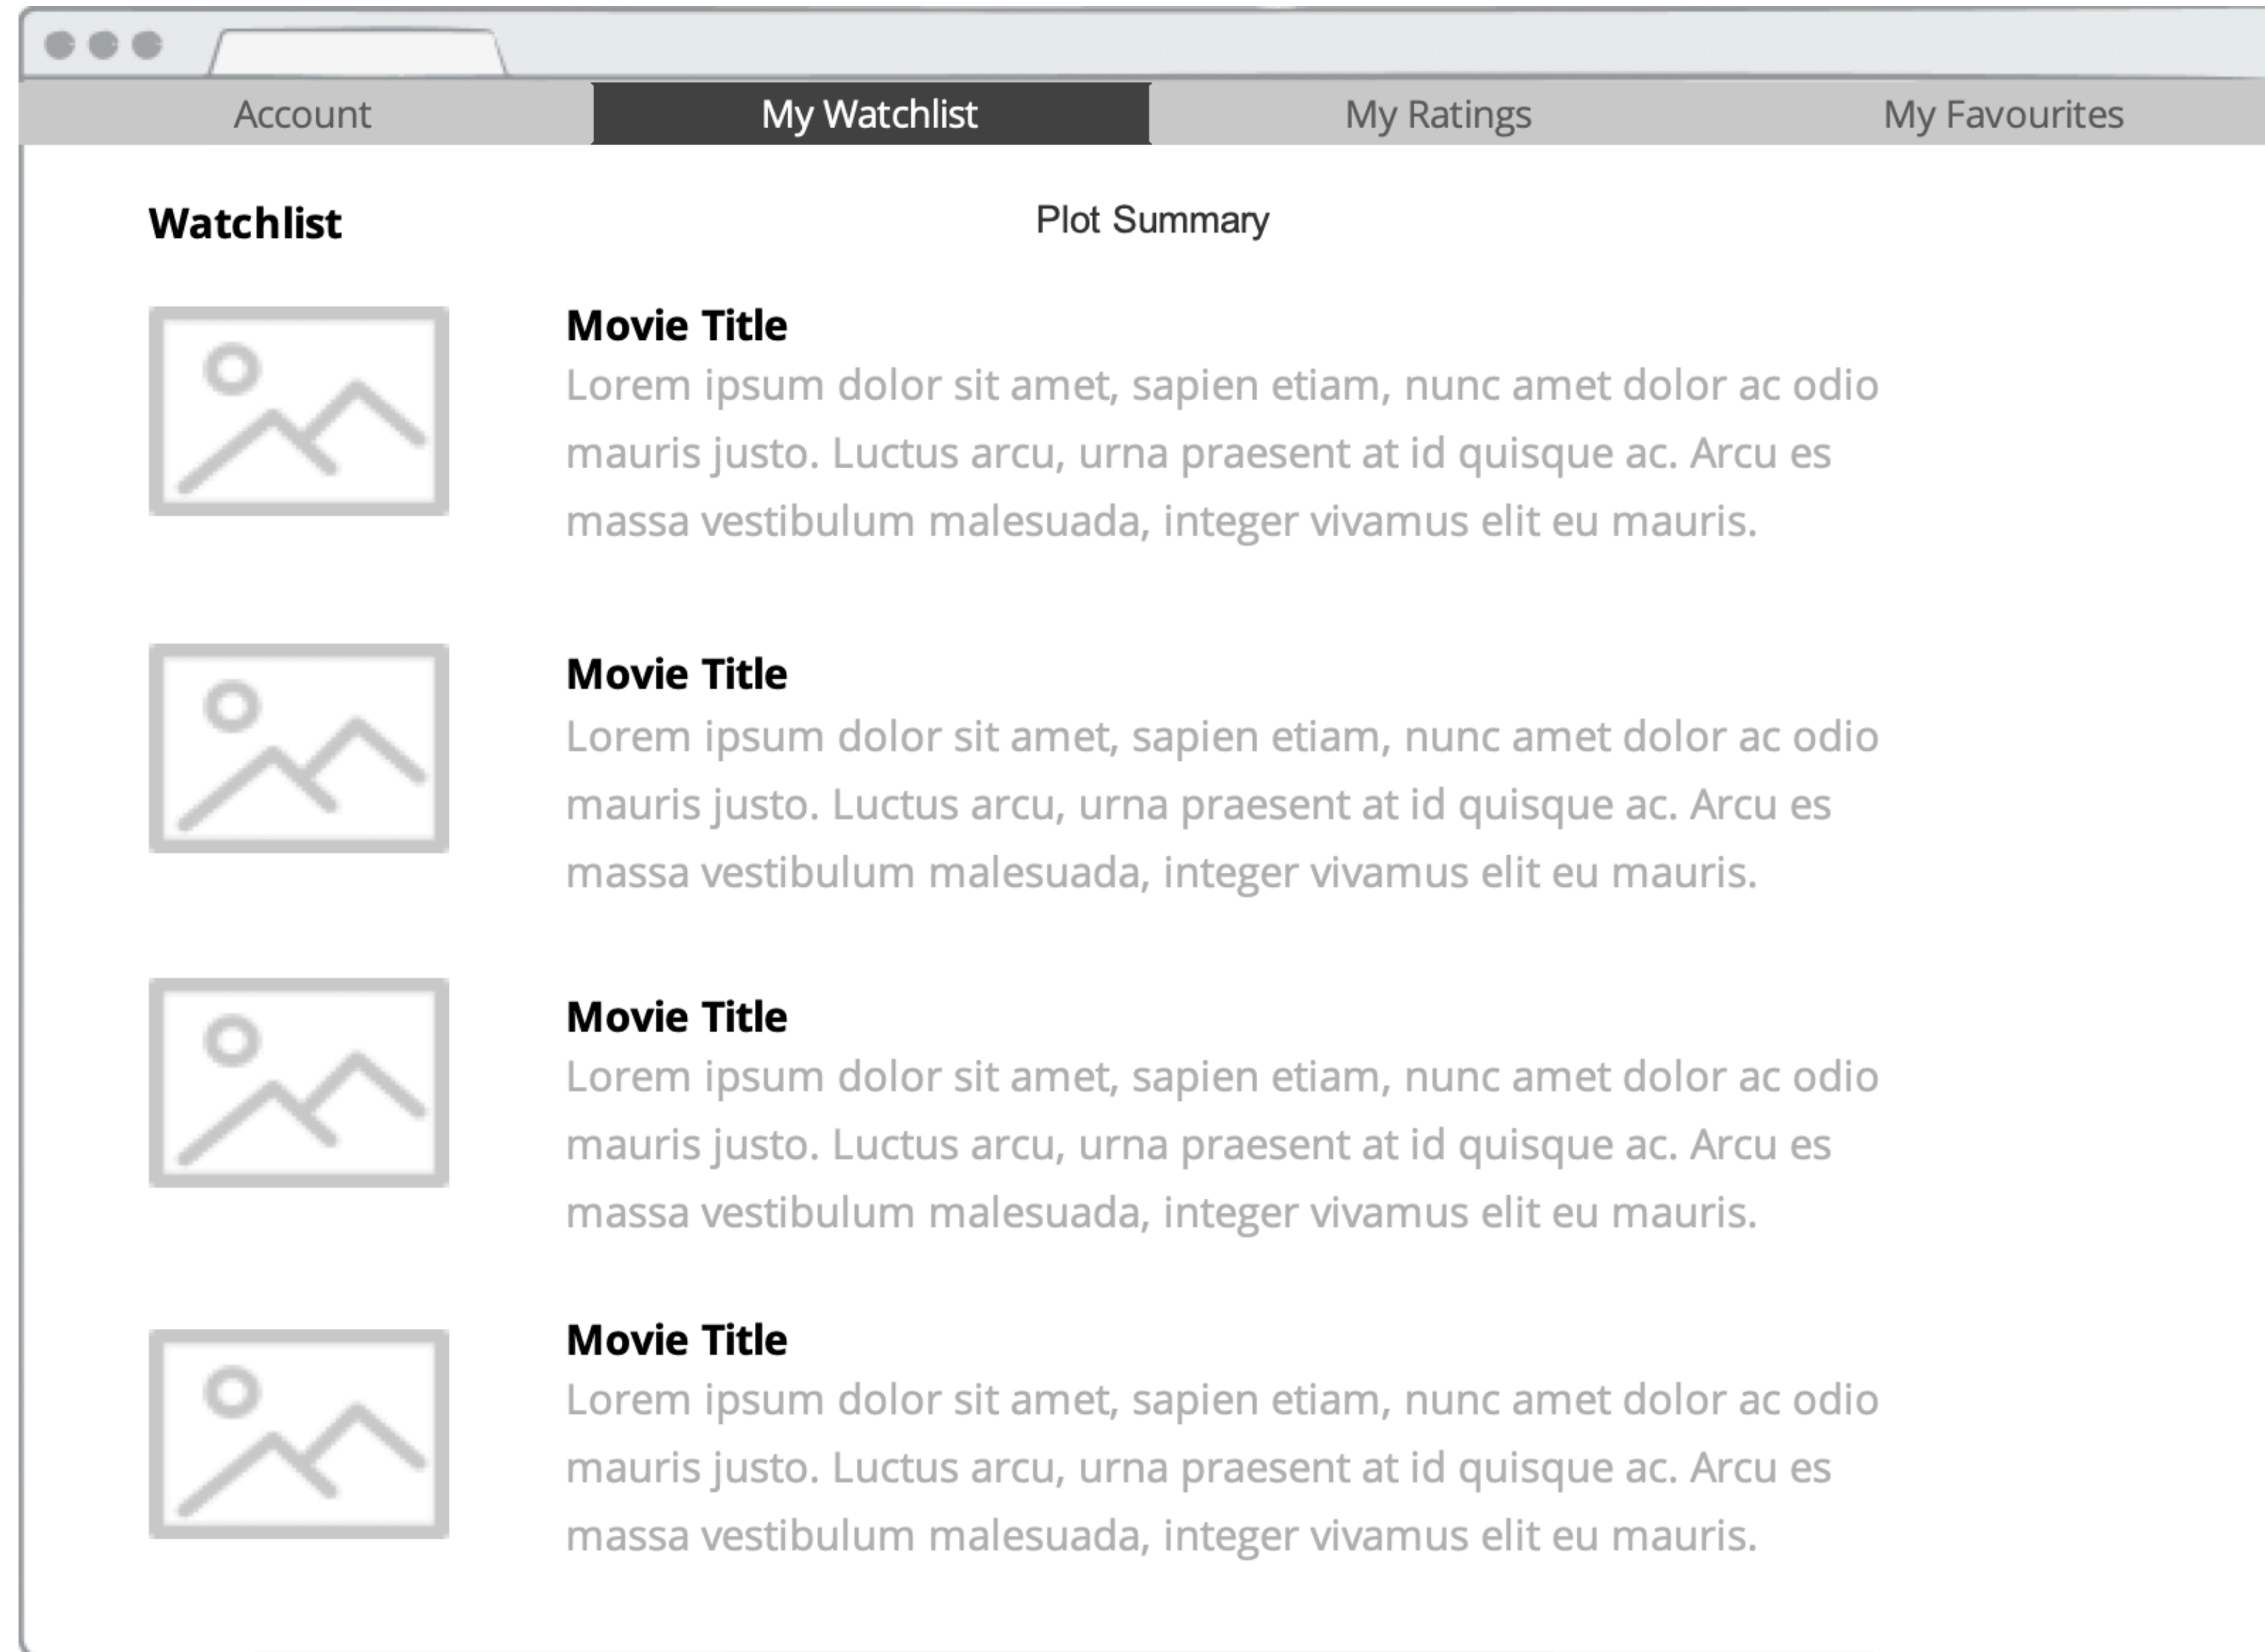

# User Flow & Wireframing

# Dashboard

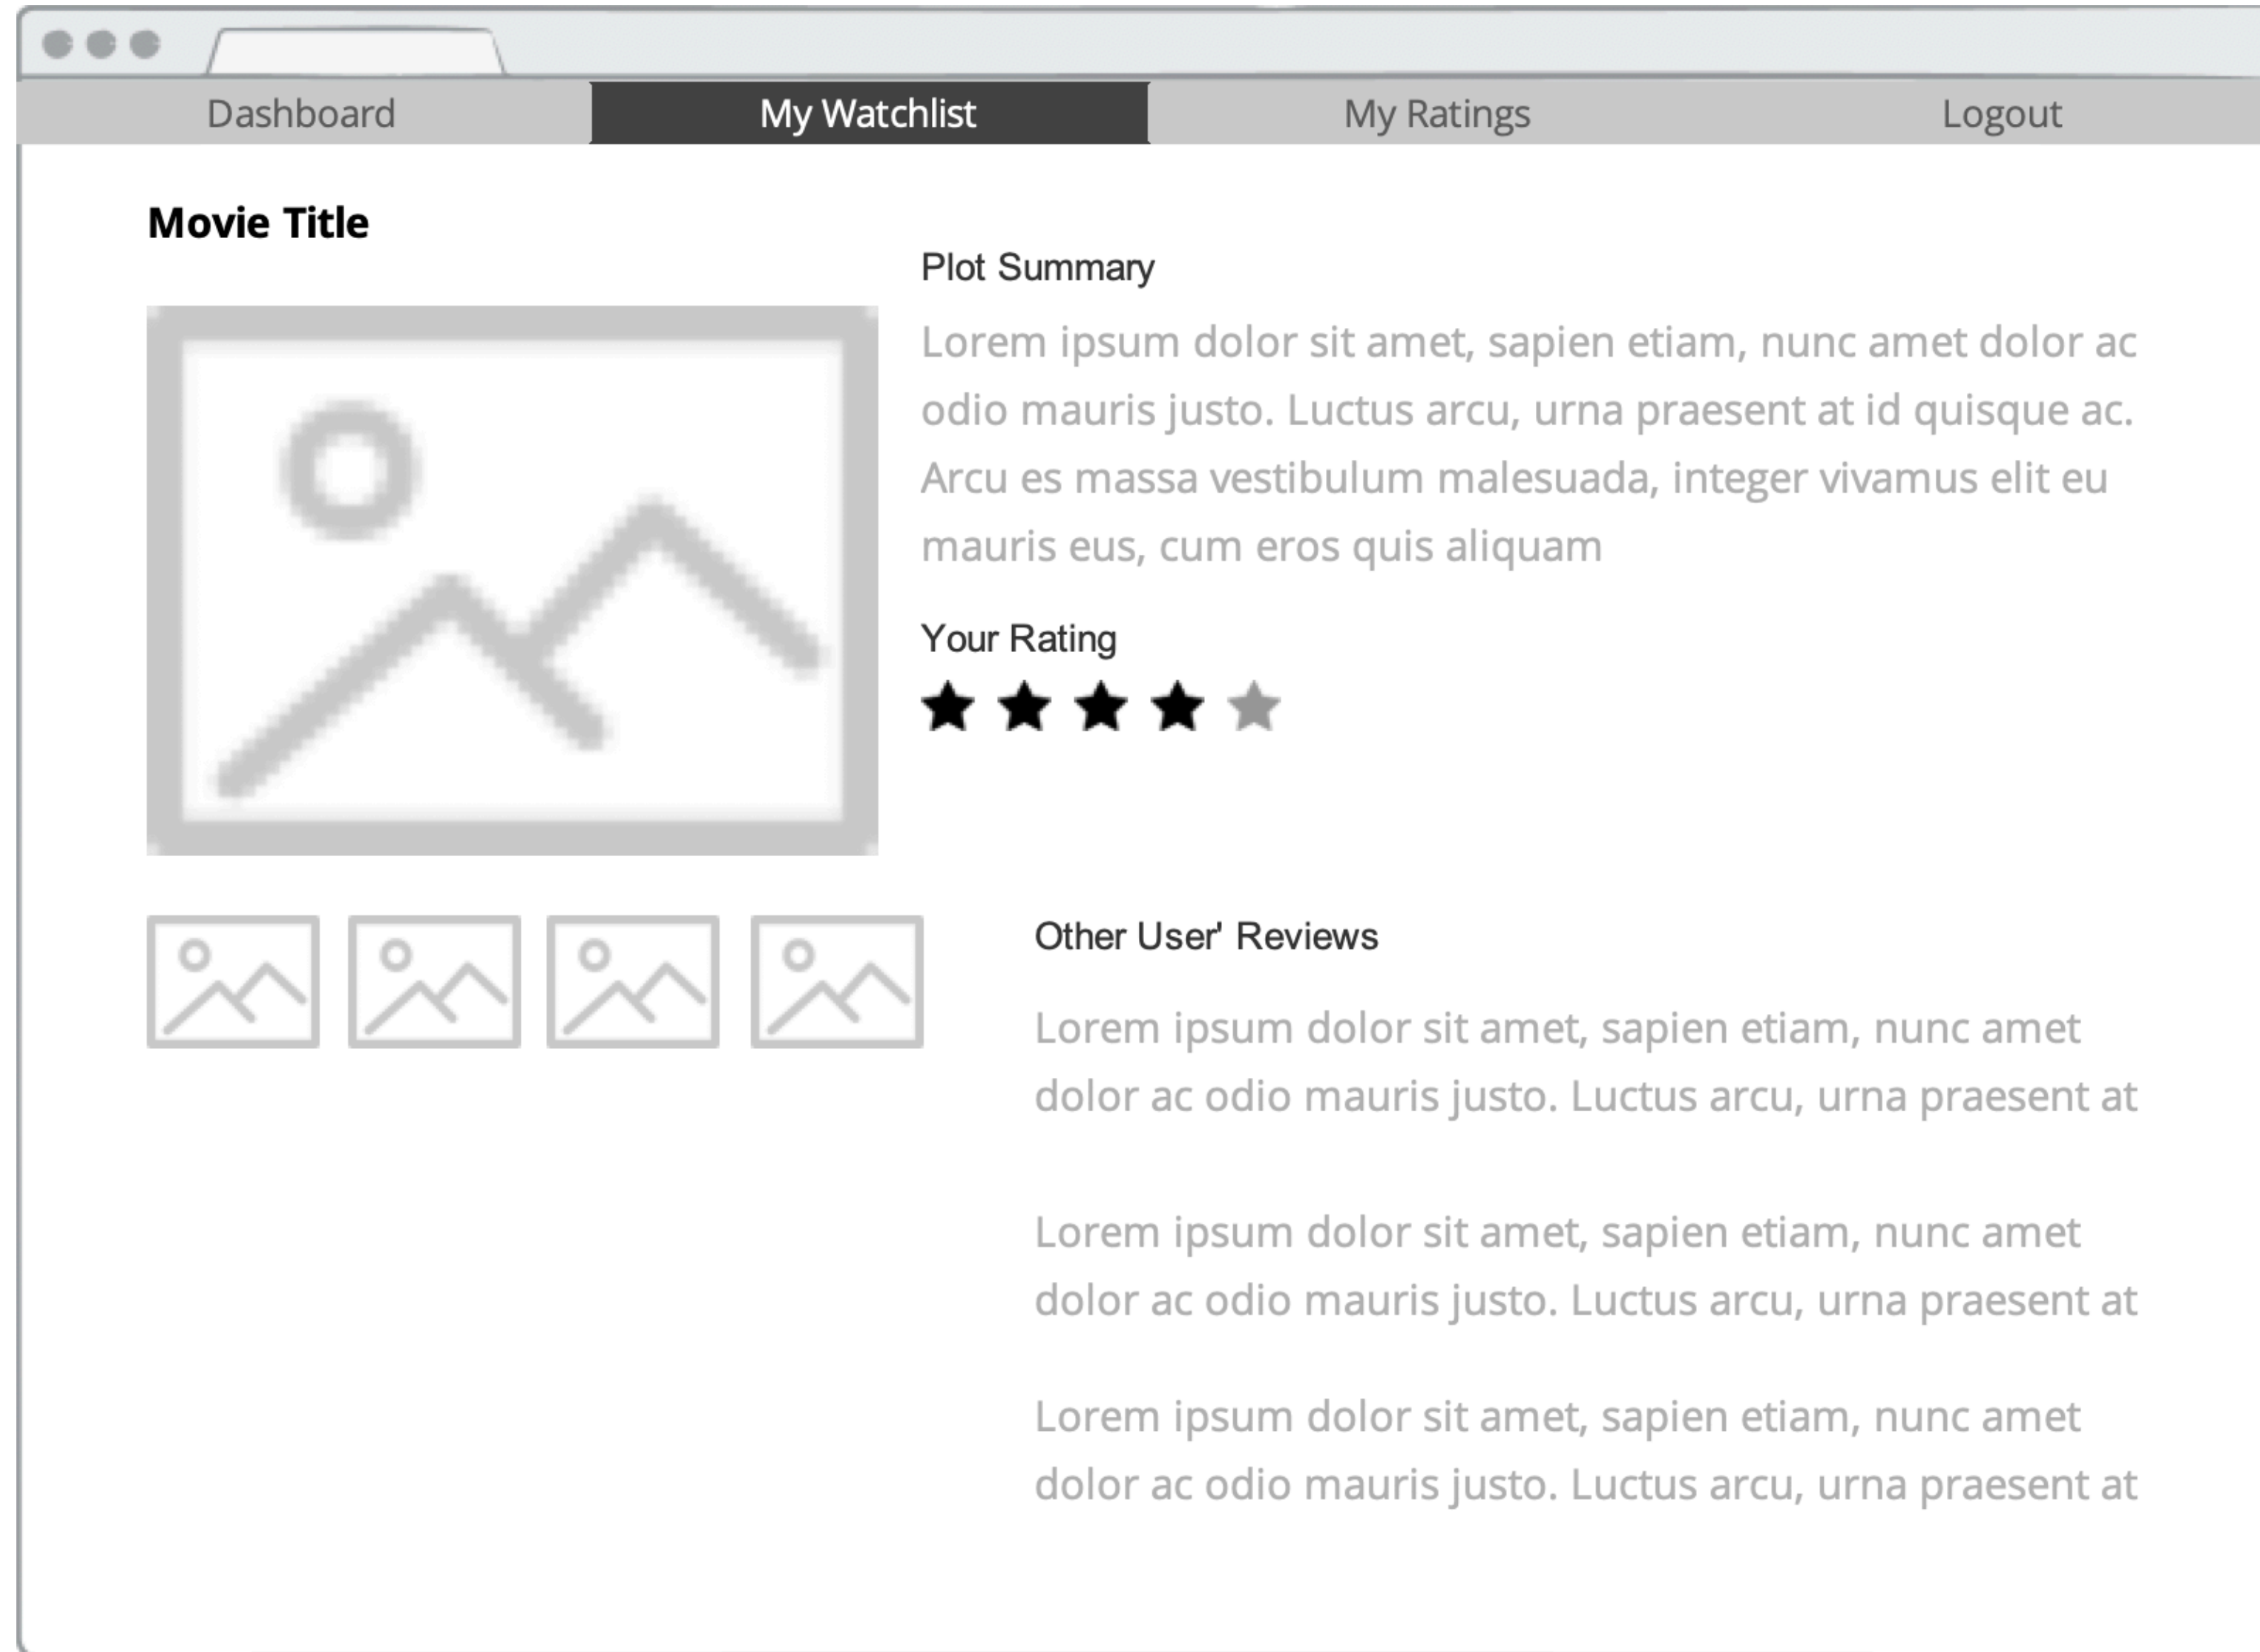

- Main page user sees upon login

# Watchlist

- List of movies user would like to watch
- Clicking on movie entry will lead to movie detail page

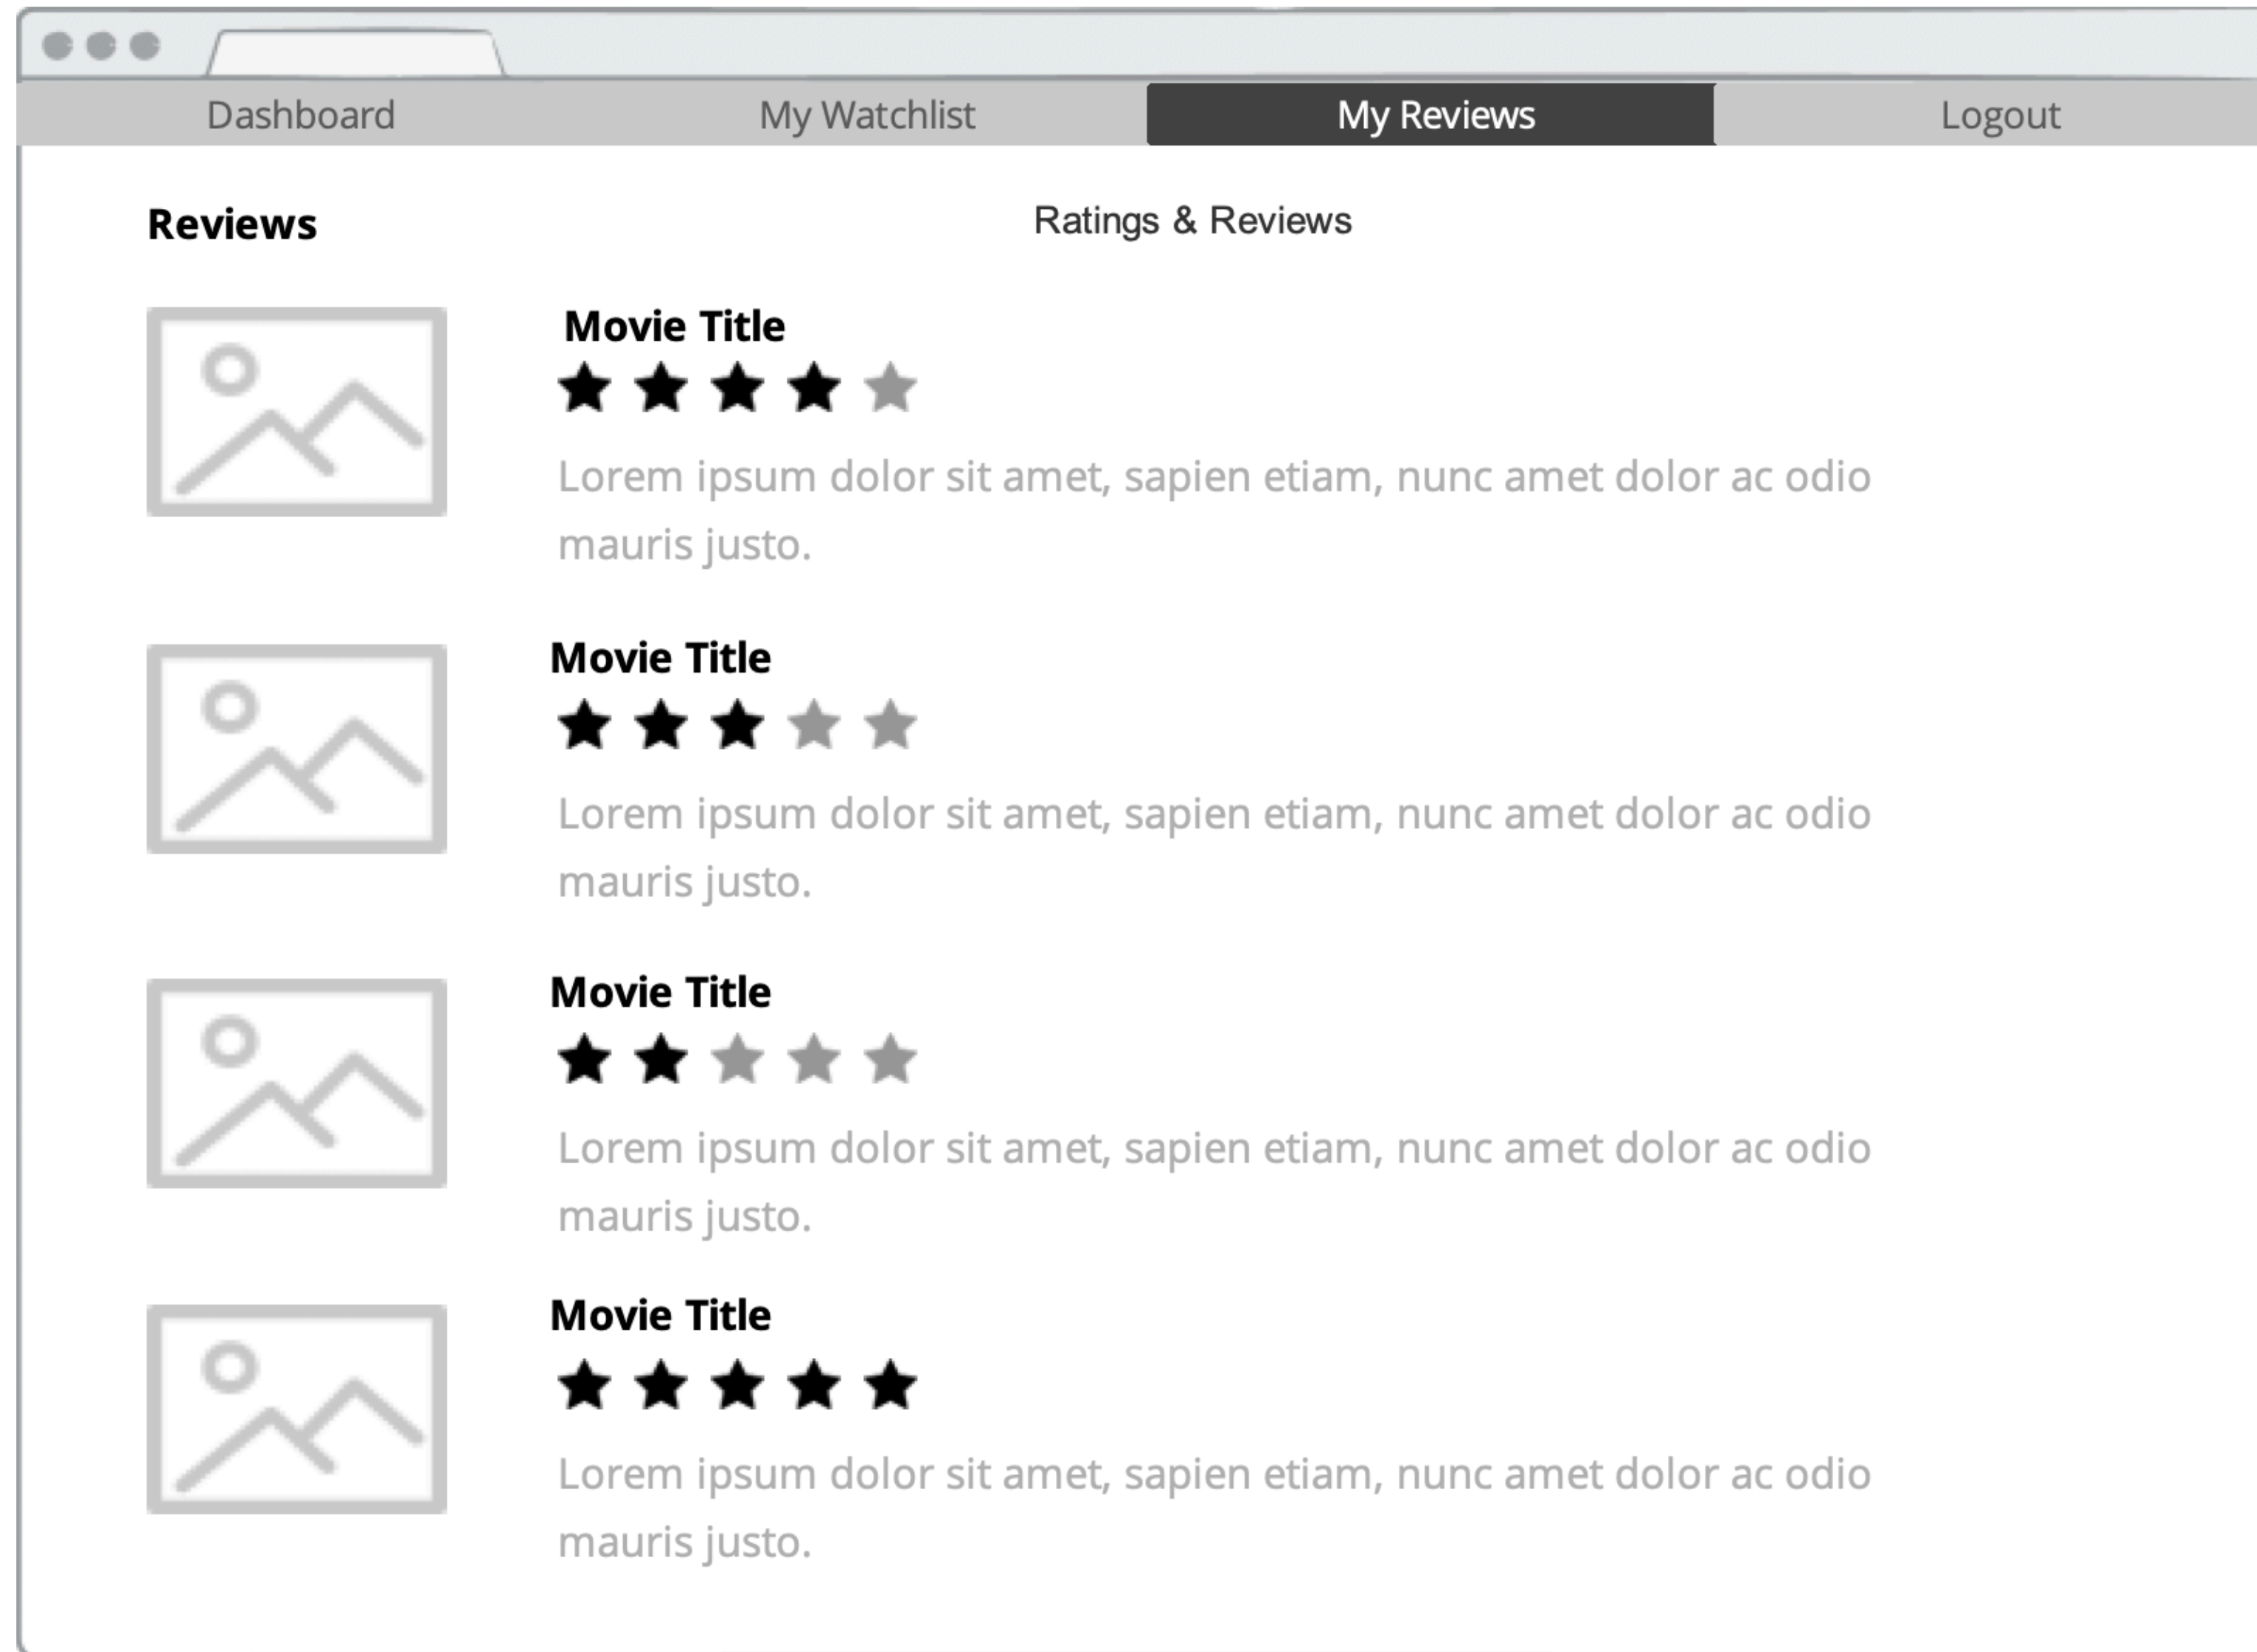

# Movie Details

- Single entry of movie
- Shows other users comments on movie

# Reviews

- List of movies user has watched and given ratings
- Clicking on movie entry will lead to movie detail page

# ERD Diagram
